Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.

(Prof. Loyce Runolfsson Jr.)

INVESTIGATIONS FOR MACHINING CHARACTERISTICS OF TITANIUM ALLOYS BY USM

LAP Lambert Acad. Publ. Sep 2010, 2010. Taschenbuch. Book Condition: Neu. 220x150x11 mm. This item is printed on demand - Print on Demand Neuware - The study was aimed to carry out research on ultrasonic machining of titanium alloys (as work material) while machining with USM using different tool materials to know their impact on material removal rate (MRR), tool wear rate (TWR), and to model these characteristics for their applications in manufacturing industry. In the current study the work has been limited to commercially pure titanium (TITAN15, ASTM Gr.2) and titanium alloy (TITAN31, ASTM Gr.5), as work material, in combination with six different tool materials (Stainless steel; High speed steel; High carbon steel; Titanium; Tungsten carbide; Diamond) for experimentation. The results showed that the response variables (out put parameters) were strongly influenced by the control factors (input parameters). 184 pp. Englisch.
