V. 1917 V. 191 1520 1520--4 let Figure 13 Fields for white, 10 mm disc. Changes in field in eleven years. Dotted line and the field for red (inner), taken October 3rd, 1916. Change in hemianopsia, confined mostly to field for white, the outline for red remaining characteristic. Continuous line--May 20th, 1916. His history is specific on the point of original cause, and later, when the left field began to shrink, we felt justified in assuming a spread to the chiasm. A second case presents itself with a horizontal line dividing the seeing and non-seeing fields, the loss confined to the upper field of the right eye. He denied a specific history, but the Wasserman test was reported positive, and he asked permission to change his mind. The blind half does not respond to light, but the seeing half does. We conclude that the lesion is anterior to the optic thalamus, and, as the lesion is not homonymous, we locate it anterior to the chiasm. There is not the characteristic involvement of the second field, and the shape of the field lost gives us the courage to suggest that the lesion is not far anterior to the chiasm. Figure 15 Fields for white, red and green, in order. Monocular hemianopsia. In this place belong the cases of gross lesions of the base of the skull. The first nerve involved is usually the third. It begins in branches...
